

SixStock

Financial data is boring and difficult, let a chatbot find everything for you!

Problem:

For the average user, access to financial data is boring and difficult to interpret.

Solution:

SixStock chatbot provides easy access to comprehensive financial data, presented in clear, easy-to-understand graphical format whether for a single company or the comparison of multiple ones.

With it, users can quickly and easily ask for specific financial information, such as revenue, expenses, and cash flow, and receive real-time updates on market trends and performance. The users have instant access to all data with a simple click from every part of the site, all while the data have been rearranged into a user-friendly and easy to read graphic.

With the ability to chat with our SixStock anytime, anywhere, users can no longer make excuses not to stay on top of their finances!

Planned Feature:

Given time to learn SixStock will evolve from a simple helping bot to a fully operative AI, able to explain all the surrounding causes for a rapid growth or fall. With the integration of Yepic AIs, it will not even be needed to read the graphs yourselves, since a voiced avatar will be able to read and explain it all.
